As a developer who is proficient with both code and design, my strengths lie in creating applications that look great without sacrificing functionality. During my 2 years within the industry, I have gained experience in many facets of web development. These include communicating with clients, scoping features, and using the agile methodology. I am currently looking for a role that provides opportunities to move further into full-stack development and improve my React skills.

## Work History

---

### Shift72

2020 - 2022

- Developed an API for uploading translations, where I was involved in architecting the API and database. In addition, I was responsible for developing the API, validation, unit-tests, writing assessment criteria, and integration testing.
- Built custom sites for clients. This involved scoping the work based on client requirements, collaborating with design and other teams to ensure we were meeting client expectations, communicating with external developers to integrate their work, and meeting strict deadlines.
- Developed navigation, carousel and various smaller components for the platform. The features were built to be modular and customisable which resulted in a significant reduction in wasted developer time doing custom work for clients.
- Upgraded the Shift72 platform to meet WCAG 2.0 accessibility standards. The work included adding semantic HTML, keyboard navigation, and generally improving the structure of the HTML and CSS. In addition to the accessibility benefits, the readability and maintainability of the codebase was significantly improved.

## Education

---

2017-2019

**Bachelor of Applied Information Technology**

*Wintec*

## Skills

---

- |              |          |                |               |
|--------------|----------|----------------|---------------|
| • HTML       | • React  | • SQL          | • Adobe XD    |
| • CSS        | • Git    | • Azure DevOps | • Photoshop   |
| • Javascript | • Github | • Linux        | • Illustrator |
